Education

University of Utah | B.S. in Games

Aug 2022 - Apr 2026 | Degree conferred April 30, 2026 | GPA 3.880/4.000

Coursework: Programming for All 1 / 2; Introductory Statistical Inference; Game Engine Fundamentals; Traditional Game Development. Dean's List, multiple semesters.

Robotics Project

Visual Grasp Verification and Failure Recovery | Personal simulation project | Oct 2026

- Helped define the task and reported missed grasps and failed retries. Questioning an unnecessary obstacle push led to comparisons of grasp directions and a stacked-object task.
- The project combines RGB-D localisation, programmed extraction, visual payload checks and recovery after a wrong grasp. The current workflow and a relocate-first baseline each completed 7/7 development layouts; no independent final test yet.
- A separate neural skill selector trained with PPO for 96 episodes. On 12 new development-validation layouts, it matched rules at 10/12 completions but was slower; the current recovery routine is programmed.

My role: task direction, hands-on testing, comparison requirements and result review. Code, debugging and experiment automation used extensive AI assistance.

Work and Internship Experience

Qainbow LLC | Technical / Systems Designer and Producer

Utah, USA | Aug 2026 - Present

- Founding-team member translating design goals into implementation tasks. For Breach Brew, develop reusable Blueprint systems, environmental materials and Niagara feedback.

TimeStay | Part-time Systems and Balance Designer

Shanghai, China | 2026 - Present

- Contribute gameplay rules, numerical configuration and balance content; communicate implementation needs with the team.

Horizon Style | Business Operations Intern

Suzhou, China | Jun - Sep 2025

- Researched overseas prospects and organised client information. Supported one international trade order under manager supervision, assisting with quotations, communication, schedules and delivery coordination.

Selected Technical Projects

Punk Plush Panic | Unity capstone | 2025 - 2026

Improved boss telegraphs; built configurable portals and path-driven traps; iterated from playtests and reduced scope for delivery. Released on Steam.

The E Book | Unity | Commercial project

Maintained balancing spreadsheets and redesigned the data workflow; developed an AI-assisted Excel-to-Unity conversion tool.

Skills

Programming and tools: Unreal Blueprint; basic Python / JSON; Excel; Git / Perforce.

Project experience: Isaac Sim / Isaac Lab, RGB-D workflows; Unity, Godot, Niagara and materials; basic Maya / Blender.
Languages: native Chinese; fluent English.
